Virtual Linguistic Laboratory

WELCOME

Welcome to the Virtual Linguistics Lab home page. This portal represents our first draft of a new structure allowing cyberinfrastructure-facilitated dissemination and sharing of materials and data to support the scientific study of language acquisition.

The navigation links to the left show the different forms of materials we are making available.

These materials may be used to support a course in scientific methods for the study of language acquisition. Various topics are covered, e.g., different tasks for assessing language production and comprehension. Faculty and students may proceed through the topics, or choose among topics, to support their course. The course may be used synchronously or asynchronously across institutions who wish to collaborate.

For each topic, the portal will make available relevant materials, including teaching presentations, related supplemental papers, audio-visual learning modules, a Research Manual, and assignments.

You must be authenticated in order to actually view documents available on this site. You can find Instructions on the link below:

[User Instructions for the VCLA Web Resources](#)

This portal is actively being developed now. Please send comments and suggestions and questions regarding the portal and its materials to bcl4@cornell.edu or mblume@utep.edu

This portal is prepared and maintained with the support of NSF Award 0753415 to Profs Blume and
